BACKGROUND AND NOTES FOR GUIDANCE

A programme of inspections of GMP Compliance monitoring for UK contract GMP Quality Control Testing Laboratories has been in place since 2005. These laboratories perform quality control testing for products that are manufactured in accordance with EU GMP and as a result are inspected against EU GMP as they apply to a contract laboratory.

Contract laboratories do not hold their own licence, but are named by manufacturing and product licence holders as a contract laboratory performing quality control testing on their behalf. It is acknowledged that there are a number of manufacturing licence and manufacturing authorisation holders that also offer contract quality control testing to GMP; these sites are not captured within this list.

The inspection cycle for UK contract GMP Laboratories is within a 3 year period. All laboratories listed within this document have been issued with a GMP certificate.

An inspection of a contract laboratory will usually be conducted when the laboratory is undertaking the following testing of either a marketed or investigational medicinal product:

Microbiological testing which includes non-sterility testing and sterility testing of either raw materials or finished products.

Chemical/physical analysis and stability studies (finished products only).

Microbiological testing of manufacturing areas, i.e. Environmental Monitoring.

LABORATORY ACTIVITIES INCLUDE:

Microbiological: Non-sterility testing

Includes but is not necessarily limited to the following tests: total viable count, absence of pathogens, environmental monitoring, microbial identifications, microbial bioassays, incubation or certification of biological indicators, LAL endotoxin testing.

Microbiological: Sterility testing

Which only applies to the sterility testing of finished sterile products.

Biological testing

Chemical/physical analysis

Contract Laboratories that have been inspected against EU GMP between June 2009 and March 2012.
