Public Assessment Report

Decentralised Procedure

Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container.

(Dexamethasone sodium phosphate)

Procedure No: UK/H/5556/001/DC

UK Licence No: PL 29831/0589

Wockhardt UK Limited
LAY SUMMARY

Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container.
(Dexamethasone sodium phosphate, eye drops, solution, 1mg/ml)

This is a summary of the Public Assessment Report (PAR) for Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container (PL 29831/0589; UK/H/5556/001/DC). It explains how Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container was assessed and its authorisation recommended, as well as its conditions of use. It is not intended to provide practical advice on how to use Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container.

This product will be referred to as Dexamethasone phosphate Eye Drops throughout the remainder of this report.

For practical information about using Dexamethasone phosphate Eye Drops, patients should read the package leaflet or contact their doctor or pharmacist.

What is Dexamethasone phosphate Eye Drops and what is it used for?
Dexamethasone phosphate Eye Drops is a ‘hybrid generic medicine’. This means that it is similar to a reference medicine containing the same active substance already authorised in the European Union (EU) called Dexafree 1mg/ml, eye drops, solution in a single-dose container.

Dexamethasone phosphate Eye Drops are used to treat inflammation of the patient’s eyes. If the patient has an infected eye (red eye, tears and mucous), the patient will be given another medicine to take at the same time as Dexamethasone phosphate Eye Drops (refer to section 2 of the package leaflet).

How do Dexamethasone phosphate Eye Drops work?
Dexamethasone phosphate Eye Drops contain the active ingredient dexamethasone, which belongs to a group of medicines called ‘corticosteroids’. They work by stopping inflammatory symptoms such as pain, heat, swelling and redness.

How is Dexamethasone phosphate Eye Drops used?
The pharmaceutical form of Dexamethasone phosphate Eye Drops is an eye drop, solution and the route of administration is into the patient’s eye.

The patient should always use this medicine exactly as their doctor has told them. The patient must check with their doctor or pharmacist if they are not sure.

The usual dose is 1 drop, 4 to 6 times a day in the eye to be treated. If the patient’s condition is more serious, they may be told to start with 1 drop every 4 hours, after the medicine has started to work. It is important to reduce the dose gradually in order to avoid the condition worsening again after the patient stops their medication.

There is no need to adjust the dose for elderly patients.

This medicine must not be used for long-term treatment in children without a break.

Please read section 3 of the package leaflet for detailed information on dosing recommendations, the
route of administration, and the duration of treatment.

This medicine can only be obtained with a prescription.

**What benefits of Dexamethasone phosphate Eye Drops have been shown in studies?**
Because Dexamethasone phosphate Eye Drops is a hybrid application and is considered to be therapeutically equivalent to the reference product, its benefits and risks are taken as being the same as those of the reference medicine.

**What are the possible side effects of Dexamethasone phosphate Eye Drops?**
The most common side effect with Dexamethasone phosphate Eye Drops (which may affect more than 1 in 10 people) is increased pressure in the eye.

Common side effects with Dexamethasone phosphate Eye Drops (which may affect up to 1 in 10 people) are discomfort, irritation, burning, stinging, itching and blurred vision after use. These are usually mild and do not last long.

For the full list of all side effects reported with Dexamethasone phosphate Eye Drops, see section 4 of the package leaflet available on the MHRA website.

For the full list of restrictions, see the package leaflet.

**Why was Dexamethasone phosphate Eye Drops approved?**
The MHRA decided that Dexamethasone phosphate Eye Drops’ benefits are greater than its risks and recommended that it be approved for use.

**What measures are being taken to ensure the safe and effective use of Dexamethasone phosphate Eye Drops?**
A risk management plan (RMP) has been developed to ensure that Dexamethasone phosphate Eye Drops is used as safely as possible. Based on this plan, safety information has been included in the Summary of Product Characteristics and the package leaflet for Dexamethasone phosphate Eye Drops including the appropriate precautions to be followed by healthcare professionals and patients.

Known side effects are continuously monitored. Furthermore new safety signals reported by patients/healthcare professionals will be monitored/reviewed continuously.

**Other information about Dexamethasone phosphate Eye Drops**
Ireland and the UK agreed to grant a Marketing Authorisation for Dexamethasone phosphate Eye Drops on 24 November 2014. A Marketing Authorisation was granted in the UK on 17 December 2014.

The full PAR for Dexamethasone phosphate Eye Drops follows this summary.

For more information about treatment with Dexamethasone phosphate Eye Drops, read the package leaflet, or contact your doctor or pharmacist.

This summary was last updated in January 2015.

1 INTRODUCTION

Based on the review of the data on quality, safety and efficacy, the Member States considered that the application for Dexamethasone phosphate Eye Drops (PL 29831/0589; UK/H/5556/001/DC) could be approved. The product is a prescription-only medicine (POM) and is indicated for treatment of non-infectious inflammatory conditions affecting the anterior segment of the eye.

The application was submitted using the Decentralised Procedure (DCP), with the UK as Reference Member State (RMS), and Ireland as Concerned Member State (CMS). The application was submitted under Article 10(3) of Directive 2001/83/EC, as amended, as a hybrid application. The reference medicinal product for this application is Dexafree 1mg/ml, eye drops, solution in a single-dose container which was originally granted in the Netherlands in 1996 (Thea Pharma NV; RVG 18658) and subsequently underwent a mutual recognition procedure (MRP) with Netherlands as RMS and Austria, Belgium, Bulgaria, Cyprus, Denmark, Finland, France, Germany, Greece, Ireland (Dexafree 1 mg/ml, eye drops, solution PA 1107/005/001), Italy, Luxembourg, Norway, Poland, Portugal, Slovenia, Spain, Sweden and the United Kingdom (Dexafree 1 mg/ml, eye drops, solution PL 20162/0013) as concerned member states in 2012.

Dexamethasone sodium phosphate is a hydrosoluble inorganic ester of dexamethasone. It is a synthetic corticosteroid with an anti-inflammatory and anti-allergic action. Dexamethasone has more potent anti-inflammatory action compared to hydrocortisone (approximately 25:1) and prednisolone (approximately 5:1).

No new clinical or non-clinical studies were conducted, which is acceptable given that this is a hybrid application cross-referring to an originator product that has been licensed for over 10 years. In accordance with the Guideline on the Investigation of Bioequivalence (CPMP/EWP/QWP/1401/98 Rev.1/Corr**) and the Note for guidance on the clinical requirements for locally applied, locally acting products containing known constituents (CPNP/EWP/239/95 final), bioequivalence and comparative clinical studies are not required and none were submitted.

The RMS has been assured that acceptable standards of Good Manufacturing Practice (GMP) are in place at all sites responsible for the manufacture, assembly and batch release of this product. For manufacturing sites within the Community, the RMS has accepted copies of current manufacturer authorisations issued by inspection services of the competent authorities as certification that acceptable standards of GMP are in place at those sites.

For manufacturing sites outside the Community, the RMS has accepted copies of current GMP Certificates of satisfactory inspection summary reports as certification that acceptable standards of GMP are in place at those non-Community sites.

The RMS and CMS considered that the application could be approved at the end of procedure (Day 210) on 24 November 2014. After a subsequent national phase, a licence was granted in the UK on 17 December 2014.
II QUALITY ASPECTS

II.1 Introduction
Each 1ml of solution contains 1mg of dexamethasone phosphate (as dexamethasone sodium phosphate). Each individual single-dose unit contains 0.4 mg dexamethasone phosphate (as dexamethasone sodium phosphate) in 0.4 ml of solution in the pharmaceutical form of eye drops, solution. Other ingredients consist of the pharmaceutical excipients sodium chloride, disodium edetate, disodium phosphate dodecahydrate (E339) and purified water. The finished product is packed into 0.4 ml transparent low density polyethylene (LDPE) single-dose units packaged in airtight pre-formable PET metal/PE transparent and PET metal/PE peelable sachet. Each sachet contains 5 single-dose units. Four sachets (20 single-dose units) are packed into one carton. Satisfactory specifications and Certificates of Analysis have been provided for all packaging components.

II.2 Drug Substance
INN: Dexamethasone sodium phosphate
Chemical name: 9-fluoro-11β,17 dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21yl disodium phosphate.
Dexamethasone 21 fosfate sodium

Structural formula:

Dexamethasone sodium phosphate is the subject of a European Pharmacopoeia monograph.

All aspects of the manufacture and control of the active substance, dexamethasone sodium phosphate, are covered by the European Directorate for the Quality of Medicines and Healthcare (EDQM) Certificate of Suitability.

Suitable specifications have been provided for all packaging used. The primary packaging has been shown to comply with current guidelines concerning contact with food.

II.3 Medicinal Product
Pharmaceutical Development
The objective of the development programme was to formulate a safe, efficacious, eye drop, solution containing 1mg of dexamethasone phosphate (as dexamethasone sodium phosphate) per each ml of
solution that could be considered to be essentially similar to the reference product Dexafree 1mg/ml, eye drops, solution in a single-dose container (Thea Pharma NV).

A satisfactory account of the pharmaceutical development has been provided.

Comparative impurity profiles have been provided for the proposed and originator product. In vitro equivalence of the proposed product to the originator product has been adequately demonstrated.

All excipients comply with their respective European Pharmacopoeia monographs. Satisfactory Certificates of Analysis have been provided for all excipients. Suitable batch analysis data have been provided for each excipient.

None of the excipients contain materials of animal or human origin.

No genetically modified organisms (GMO) have been used in the preparation of this product.

**Manufacture of the product**
A satisfactory batch formula has been provided for the manufacture of the product, along with an appropriate account of the manufacturing process. The manufacturing process has been validated at commercial-scale batch size and shown satisfactory results.

**Finished Product Specification**
The finished product specification proposed is acceptable. Test methods have been described that have been adequately validated. Batch data have been provided that comply with the release specifications. Certificates of Analysis have been provided for all working standards used.

**Stability of the Product**
Finished product stability studies were performed in accordance with current guidelines on batches of finished product in the packaging proposed for marketing. The data from these studies support a shelf-life of 36 months for the unopened sachet. After opening the sachet, the contents must be used within 28 days. After opening the single-dose container, the contents must be used immediately. Discard any unused contents. The storage conditions are ‘Do not store above 25°C. Store in the original package.’

Suitable post approval stability commitments have been provided to continue stability testing on batches of finished product.

**II.4 Discussion on chemical, pharmaceutical and biological aspects**
There are no objections to the approval of this application from a pharmaceutical viewpoint.

**II.5 Summary of Product Characteristics (SmPC), Patient Information Leaflet (PIL) and Labels**
In accordance with Directive 2010/84/EU the Summaries of Product Characteristics (SmPC) and Patient Information Leaflets (PIL) for products granted Marketing Authorisations at a national level are available on the MHRA website.

The approved labelling for Dexamethasone phosphate Eye Drops is presented below:
Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container

For use in the eyes only

Marketing Authorisation Holder
Wockhardt UK Ltd, Ash Road North, Wrexham, LL13 1UF, UK
PAR: Dexamethasone phosphate 1mg/ml (as sodium phosphate) Eye Drops, Solution in a single-dose container
III NON-CLINICAL ASPECTS

III.1 Introduction
As the pharmacodynamic, pharmacokinetic and toxicological properties of dexamethasone are well-known, no new non-clinical studies are required and none have been provided. An overview based on the literature review is, thus, appropriate.

The applicant’s non-clinical expert report has been written by an appropriately qualified person and is satisfactory, providing an appropriate review of the relevant non-clinical pharmacology, pharmacokinetics and toxicology.

III.2 Pharmacology
Not applicable for this product type. Refer to section ‘III.1; Introduction’ detailed above.

III.3 Pharmacokinetics
Not applicable for this product type. Refer to section ‘III.1; Introduction’ detailed above.

III.4 Toxicology
Not applicable for this product type. Refer to section ‘III.1; Introduction’ detailed above.

III.5 Ecotoxicity/environmental risk assessment (ERA)
Since Dexamethasone phosphate Eye Drops is intended for generic substitution, this will not lead to an increased exposure to the environment. An environmental risk assessment is therefore not deemed necessary.

III.6 Discussion on the non-clinical aspects
No new non-clinical studies were conducted, which is acceptable given that the application was based on being a hybrid medicinal product of an originator product that has been licensed for over 10 years.

There are no objections to the approval of this application from a non-clinical viewpoint.

IV CLINICAL ASPECTS

IV.1 Introduction
As per the Guideline on the Investigation of Bioequivalence (CPMP/EWP/QWP/1401/98 Rev.1/Corr**) and the Note for guidance on the clinical requirements for locally applied, locally acting products containing known constituents (CPNP/EWP/239/95 final), bioequivalence studies were not conducted and none are required for this type of product.

No new clinical data were provided. The applicant has justified the grounds for a biowaiver for the need to provide equivalence data and this is accepted, on the basis that the product is an aqueous solution for topical use, with the same concentration of active substance and the same excipient profile as the reference product.

No new efficacy or safety studies have been performed and none are required for this type of application. A comprehensive review of the published literature has been provided by the applicant, citing the well-established clinical pharmacology, efficacy and safety of ocular dexamethasone.
IV.2 Pharmacokinetics
As per the *Guideline on the Investigation of Bioequivalence* (CPMP/EWP/QWP/1401/98 Rev.1/Corr**) and the *Note for guidance on the clinical requirements for locally applied, locally acting products containing known constituents* (CPNP/EWP/239/95 final), the test product is to be administered as an aqueous solution for topical use, with the same concentration of active substance and the same excipient profile as the reference product. No bioequivalence study has been submitted with this application and none is required.

IV.3 Pharmacodynamics
No new pharmacodynamic data were submitted and none were required for an application of this type.

IV.4 Clinical efficacy
No new efficacy data were submitted and none were required for an application of this type.

IV.5 Clinical safety
No new safety data were submitted and none were required for this application.

IV.6 Risk Management Plan (RMP)
The marketing authorisation holder (MAH) has submitted a risk management plan (RMP), in accordance with the requirements of Directive 2001/83/EC as amended, describing the pharmacovigilance activities and interventions designed to identify, characterise, prevent or minimise risks relating to Dexamethasone phosphate Eye Drops.

A summary of safety concerns as approved in the RMP is listed below:

<table>
<thead>
<tr>
<th>Summary of safety concerns</th>
</tr>
</thead>
</table>
| **Important identified risks** | - hypersensitivity to any of the ingredients  
- masking signs of infections (including viral, parasitic, bacterial and fungal infections)  
- perforation, ulceration and injury of cornea with uncompleted epithelialisation  
- known glucocorticosteroid-induced ocular hypertension |
| **Important potential risks** | - ocular hypertension/glaucoma (especially for patients with previous IOP induced by steroids or with pre-existing high IOP or Glaucoma) and also cataract formation, especially in children and elderly population associated with prolonged use.  
- Opportunist infections (impaired immune response)  
- patients with corneal ulcer  
- thinning of the cornea and sclera  
- corneal calcification requiring corneal graft surgery  
- adrenal suppression in children with long term use  
- Chronic use risks - cataracts  
- Use with contact lenses |
| **Important missing information** | - Interaction with ocular medication  
- Pregnancy, lactation and fertility |
A summary table of safety concerns and planned risk minimisation activities, as approved in the RMP, is listed below:

<tr>
<td>Interaction with ocular medication</td>
<td>Routine risk minimisation. The SmPC is up to date. Section 4.5 Interaction with other medicinal products and other forms of interaction, states – No interaction studies have been performed. In case of concomitant treatment with other eye drops, solution, instillations should be spaced out by 15 minutes. Superficial stromal corneal precipitations of calcium phosphate have been reported under combined use of corticosteroids and topical beta-blockers.</td>
<td>No additional risk minimisation activities are necessary for the safe and effective use of the medicinal product.</td>
</tr>
<tr>
<td>Pregnancy, lactation and fertility</td>
<td>Routine risk minimisation. The SmPC is up to date. Section 4.6 Fertility, pregnancy and lactation states – Pregnancy Insufficient data are available on the use of Dexamethasone phosphate 1 mg/ml, eye drops, solution in single-dose container in human pregnancy to assess possible harmful effects. Corticosteroids cross the placenta. Teratogenic effects have been observed in animals (see section 5.3). However, there is no evidence to date that teratogenic effects are induced in humans. After systemic use of corticosteroids, at higher doses, effects on the unborn/neonate (intrauterine growth inhibition, inhibition of the function of the adrenal cortex) have been reported. However, these effects have not been reported for ocular use. As a precautionary measure, it is preferable to avoid the use of Dexamethasone 1 mg/ml, eye drops, solution in single-dose container during pregnancy.</td>
<td>No additional risk minimisation activities are necessary for the safe and effective use of the medicinal product.</td>
</tr>
</tbody>
</table>
The RMP for Dexamethasone phosphate Eye Drops adequately documents the safety concerns for the product. Routine pharmacovigilance and risk minimisation are sufficient for the safety concerns in the RMP, given the established benefit-risk profile of dexamethasone and the information available to inform decisions on the balance of benefits and risks when it is used in clinical practice.

IV.7 Discussion on the clinical aspects

No new clinical studies were conducted, which is acceptable given that the application was based on being a hybrid medicinal product of an originator product that has been licensed for over 10 years.

A bioequivalence study was not necessary to support this application as both test and reference products are administered as aqueous solutions for topical use, with the same concentration of active substance and the same excipient profile.

The grant of a marketing authorisation is recommended for this application.

V User consultation

The package leaflet has been evaluated via a user consultation study, in accordance with the requirements of Articles 59(3) and 61(1) of Directive 2001/83/EC. The language used for the purpose of user testing the PIL was English.

The results show that the package leaflet meets the criteria for readability, as set out in the Guideline on the readability of the label and package leaflet of medicinal products for human use.

VI Overall conclusion, benefit/risk assessment and recommendation

The quality of the product is acceptable, and no new non-clinical or clinical safety concerns have been identified. Extensive clinical experience with dexamethasone is considered to have demonstrated the therapeutic value of the compound. The benefit-risk is, therefore, considered to be positive.
