Fluorigard Daily Rinse is used for the prevention of dental caries (tooth decay). This dental solution contains fluoride as sodium salt, which belongs to a group of medicines called caries preventing agents. Cariostatic agents prevent decay, cavities and fillings.

Do not drink. If you are allergic to sodium fluoride or any of the other ingredients. Not for use under 6 years of age. Do not swallow.

This dental solution contains Benzoic Acid and Sodium Benzoate, that are mildly irritant to the skin, eyes and mucous membranes.

Directions for use: Ideally use at a different time to toothbrushing. Rinse once daily with 10 ml (2 teaspoonfuls) around and between the teeth for one minute and spits out. Avoid drinking, eating or rinsing mouth for 15 minutes after use. Do not exceed stated dose. Excessive dosage may cause nausea and dental fluorosis in children under 7. If you have any further questions on the use of this product, ask your dental or pharmacist.

FLUORIGARD DAILY RINSE

Clinically proven to prevent tooth decay which results in cavities and fillings.

Increases tooth resistance to plaque acids.

Fluorigard Daily Rinse is used for the prevention of dental caries (tooth decay). This dental solution contains fluoride as a sodium salt, which belongs to a group of medicines called caries preventing agents.

Fluoride works in three ways to protect teeth from attack by the acids produced by sugars.

1. Reduces the formation of plaque acids.
2. Prevents mineral loss caused by plaque acids.
3. Promotes remineralisation of early decay.

Unique triple action formulation.

Do not swallow.
Do not use if you are allergic to sodium fluoride or any of the other ingredients. Not for use in children under 6 years of age. This dental solution contains Benzoic Acid and Sodium Benzoate, that are mildly irritant to the skin, eye and mucous membranes.
