Read all of this leaflet carefully before you start using this medicine because it contains important information for you.

1. What Chloramphenicol Eye Ointment is and what it is used for

Chloramphenicol Eye Ointment contains the active substance chloramphenicol, which is an antibiotic.

Chloramphenicol Eye Ointment is used to treat acute bacterial conjunctivitis, which is an infection of the outer surface of eye that causes redness, discomfort and discharge from the affected eye. Your doctor can provide further advice about these symptoms.

Chloramphenicol Eye Ointment is indicated in both adults and children.

2. What you need to know before you use Chloramphenicol Eye Ointment

Do not use Chloramphenicol Eye Ointment if you:

- are sensitive/allergic to chloramphenicol or any of the other ingredients of this medicine (listed in section 6)
- wear any type of contact lenses.

Warning and precautions

Talk to your doctor before using this medicine if you:

- have problems with your blood (in particular very low numbers of blood cells) after taking chloramphenicol
- you, or anyone in your family, have had blood or bone marrow problems
- have had eye surgery within the last 6 months
- have an eye injury
- have glaucoma
- have dry eye syndrome
- have recently had an eye infection

Other medicines and Chloramphenicol Eye Ointment

Please tell your doctor or pharmacist if you are applying any other type of eye drops or eye ointment before you start to use this medicine. Your medicine may affect their action and could alter their effect.

Tell your doctor or pharmacist if you are taking or using, have recently taken or used any other medicines, including any other type of ointment or eye drops. This also includes medicines obtained without any prescription.

Pregnancy and breast-feeding

If you are pregnant or breast-feeding, ask your doctor for advice before taking this medicine. Chloramphenicol Eye Ointment should not be used by pregnant women or women who are breast-feeding unless necessary.

Driving and using machines

Do not drive or operate machines if you have blurred vision after using Chloramphenicol Eye Ointment. You should wait until this clears before driving or using machines.

3. How to use Chloramphenicol Eye Ointment

Always use Chloramphenicol Eye Ointment exactly as your doctor has told you. Check with your doctor or pharmacist if you are not sure.

The recommended dose:

Use in adults and children under 18 years of age

A small amount (about 1 cm) of ointment to be applied into the affected eye (every three hours or more frequently if required), as directed by your doctor.

Use in newborn infants

Your child’s doctor may prescribe a lower dose to reduce the risk of side effects. The maximum duration of treatment is 10-14 days.

Chloramphenicol may not work against certain types of infections. If your symptoms are not getting better you should tell your doctor immediately.

If you use Chloramphenicol Eye Ointment for a long time, your doctor may want to take blood samples to make sure the chloramphenicol has not affected your blood in any way.

The contents are sterile until the seal is broken. Do not use if the seal is broken before first opening.

Always wash your hands before applying the ointment.

4. Possible side effects

Like all medicines, Chloramphenicol Eye Ointment can cause side effects, although not everybody gets them. Most of these side effects affect only the eye and may not last very long.

Serious side effects

If you notice any of the following side effects, you must stop using the ointment and contact your doctor or go to the nearest hospital casualty department immediately:

- swelling of your face and neck
- difficultly in breathing
- a drop in blood pressure and unconsciousness
- high temperature
- rashes that may be red and raised and may blister.

Less severe side effects:

- allergic reactions that affect only the eyes and can cause redness and itching, with swelling of the eyelids.
- other local side effects:
  - burning or stinging in and around the eye.

If you have any severe or persistent side effect you should stop using the ointment and contact your doctor immediately.

When chloramphenicol is given by mouth or by injection, it may cause drops of the numbers of all types of blood cells leading to anemia, infections and easy bruising and bleeding. Very occasionally, these effects cannot be reversed and have been fatal. Although only very small amounts of chloramphenicol is absorbed from the eye ointment into your bloodstream, there have been reports of these severe effects even with eye ointment.

5. How to store Chloramphenicol Eye Ointment

Keep this medicine out of the sight and reach of children.

Do not store the tube at a temperature above 25°C. Protect from light.

Do not use this medicine for longer than 28 days after first opening the tube.

Do not use Chloramphenicol Eye Ointment after the expiry date which is stated on the tube and on the carton the tube is packed in.

Do not throw away medicines via wastewater or household waste. Ask your pharmacist how to dispose of medicines you no longer use. These measures will help to protect the environment.
