Information for the user

Chesty Cough Linctus with Decongestant (Guaifenesin, Pseudoephedrine Hydrochloride)

Read all of this leaflet carefully because it contains important information for you. This medicine is available without prescription to treat minor conditions. However, you still need to take it carefully to get the best results from it.

- Keep this leaflet, you may need to read it again
- Ask your pharmacist if you need more information or advice

What this medicine is for
This medicine contains Pseudoephedrine, a decongestant, which acts to relieve a blocked nose. It also contains Guaifenesin, an expectorant, which acts to loosen and relieve phlegm on the chest.

It can be used to relieve the symptoms of a chesty cough, catarrh and a blocked nose without causing drowsiness.

For children, simple treatments should be tried first before you give this medicine. Further information on “Treating coughs and colds in children” is provided at the end of this leaflet.

Before you take this medicine
This medicine can be taken by adults and children of 6 years and over. However, some people should not take this medicine or should seek the advice of their pharmacist or doctor first.

X Do not take:
- If you are allergic to any of the ingredients in this medicine (see “What is in this medicine”)
- If you are allergic to other decongestants
- If you have severe kidney problems
- If you have heart or blood vessel disease, including poor circulation in your hands or feet
- If you have high blood pressure (including that due to a tumour near your kidney)
- If you have diabetes
- If you have an overactive thyroid
- If you have raised pressure in the eye (glaucoma)
- If you are taking any of these medicines:
  - Monoamine oxidase inhibitors or moclobemide (for depression), or have taken them in the last 14 days
  - Medicines called beta-blockers (normally for heart problems)
  - Other decongestants
  - Other medicines to stop you coughing
- If you have an intolerance to some sugars, unless your doctor tells you to (this medicine contains sucrose)
- If you are a man with prostate problems
- If you are pregnant

! Talk to your doctor:
- If you have a long-term cough or asthma (do not take this medicine if you are wheezing or if you are having an asthma attack)

! Talk to your pharmacist or doctor:
- If you have other kidney problems (see “Do not take”)
- If you also have a fever, rash or constant headache
- If you are breastfeeding

Other important information
This medicine may interfere with the results of some urine tests. If you are having any urine tests, tell the doctor or hospital staff that you are taking this medicine.

Information about some of the ingredients in this medicine: The colour carmoisine (E122) in this medicine may cause allergic reactions.

If you take other medicines
Before you take this medicine make sure that you tell your pharmacist about ANY other medicines you might be using at the same time, particularly the following:

- Medicines to treat high blood pressure
- Medicines for heart problems (e.g. digoxin)
- Medicines which may cause a dry mouth (e.g. tricyclic antidepressants), medicines to reduce your appetite or stimulant medicines
- Ergot alkaloids (for migraine)
- Oxytocin (to induce labour and stop excessive bleeding after the birth)

If you are unsure about interactions with any other medicines, talk to your pharmacist. This includes medicines prescribed by your doctor and medicine you have bought for yourself, including herbal and homeopathic remedies.

✓ How to take this medicine
Check the seal is not broken before first use. If it is, do not take the medicine.

**Treating coughs and colds in children**

It's normal for children to get 8 or more colds in a year, however gradually they build up immunity and get fewer colds. Most colds will get better within a few days and you may not need to do more than keep your child comfortable until they get over it. Antibiotics will not help to treat a cold as they are caused by viruses and not bacteria.

Follow these simple steps, which may help your child overcome their cough or cold:

1. **If your child is hot or has a fever:** Increase the amount of fluid your child normally drinks. Lower their temperature with a Paracetamol or Ibuprofen medicine, which is suitable for children. (Paracetamol is not suitable for children under 2 months. Ibuprofen is not suitable for children under 3 months).

   Your pharmacist will be able to help you find a suitable product if in doubt.

2. **For coughs:** Although it may be distressing to hear your child cough, the coughing itself serves an important purpose. It helps to clear phlegm on the chest or mucus from the nose. Give your child plenty of lukewarm clear fluids to drink, which may help loosen the phlegm and relax the airways.

3. **To help with breathing:** Plain saline nose drops, available from your pharmacy, can help babies with blocked noses who are having trouble feeding.
