Carbamazepine Essential Pharma Suppositories are and what they are used for Carbamazepine, the active ingredient in Carbamazepine Essential Pharma Suppositories, is an anti-convulsant medicine (generic name).
Your doctor will work out the dose that you need. It varies from person to person, so you will have to be followed closely after your first dose.

Never take them by mouth. Suppositories are designed to be inserted into the back passage (rectum) for absorption into the bloodstream.

If you are having problems with urination, your doctor may recommend the use of suppositories to help you empty your bladder. These should be used after you have had the usual quantity of liquid to drink.

The doctor will tell you the dose you need. Always follow his/her instructions carefully. The dose will be on the pharmacist's label. Check the label carefully. It is important that you understand what you are taking before you are treated with Carbamazepine and sometimes for as long as you have been told, unless you have any problems. Check with your doctor in that case, check with your doctor.

If you forget to take a dose, take one as soon as you remember. If you forget to take your medicine, do not double the dose and forget about the one you missed.

How much is too much? People have seen effects from taking too much.

• Lactose (do not eat milk, cow's milk, or dairy products that contain lactose)
