3. How to use Salbutamol Inhalation Solution

3.1 To use Salbutamol Inhalation Solution

Always use Salbutamol Inhalation Solution exactly as your doctor has told you. The amount you use will depend on the dose you are using.

3.2 BEFORE YOU USE Salbutamol Inhalation Solution

3.2.1 If you have any questions, ask your doctor or pharmacist for advice on how to make sure the nebuliser mist (or the aerosol spray) does not get into your eyes.

3.2.2 If you are using a nebuliser, your doctor will instruct you in how to correctly use it. You should contact your doctor immediately to discuss the following side effects:

- A condition called acute angle-closure glaucoma which may cause sudden eye pain, redness of the eyes and blurred vision if any of the side effects above get serious, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

4. POSSIBLE SIDE EFFECTS

Salbutamol Inhalation Solution can cause side effects, although not everybody gets them. If you experience any of the following side effects affecting fewer than 1 in 100 (0.01%) people whilst taking this medicine, contact your doctor immediately and stop taking this medicine:

- An increase in heart rate. You may have a fast beat, or a rapid, uncomfortable, or continuous pounding of the heart. You may have chest tightness or shortness of breath. It works by opening up the airways to allow more air to flow into and out of the lungs. This makes it easier to breathe, so you may be able to breathe more easily.

- Uneven heartbeat, or an extra heartbeat.

Theophylline - if you suffer from heart problems, irregular heart rhythm, high blood pressure or angina

5. FURTHER INFORMATION

If you have any further questions on the use of this product, ask your doctor or pharmacist.
