**IN THIS LEAFLET:**
1. What this medicine is and what it is used for
2. Before you take this medicine
3. Possible side effects
4. How to store this medicine
5. Further information

**WHAT THIS MEDICINE IS AND WHAT IT IS USED FOR**

Morrisons Single Dose Thrush Treatment 150mg Capsule is the brand name of this medicine. Each capsule contains 150mg of the active substance fluconazole.

Fluconazole belongs to a group of drugs called antifungal agents and is used to treat vaginal thrush.

**POSSIBLE SIDE EFFECTS**

If any of the side effects gets serious, or if you notice any side effect not listed in this leaflet, please tell your doctor or pharmacist.

**BEFORE YOU TAKE THIS MEDICINE**

Do NOT take this medicine if you:
- are allergic (hypersensitive) to fluconazole, any of the other ingredients of this medicine or other antifungals and thrush treatments
- are taking terfenadine or cisapride (See section “Taking other medicines”).

**HOW TO TAKE THIS MEDICINE**

If your condition does not improve after seven days:

- you are under 16 or over 60 years of age
- you are taking any other medication other than “the Pill” (oral contraceptives)
- you have had thrush more than twice in the last six months
- you have any disease affecting your liver or kidneys or if you have had unexplained jaundice
- you suffer from any other chronic disease or illness
- you or your partner have had exposure to a sexually transmitted disease
- you are unsure about the cause of your symptoms.

**HOW TO STORE THIS MEDICINE**

Do not use this medicine after the expiry date. The expiry date refers to the last day of that month.

Keep out of the reach and sight of children.

Important information about some of the ingredients of this medicine

- Patients who are intolerant to lactose should note that this medicine contains a small amount of lactose. If your doctor has told you that you have an intolerance to some sugars, contact your doctor before taking this medicine.

Taking this medicine with food and drink

- This medicine does not interact with alcohol, and may be taken with or without food, at any time of the day.

**FURTHER INFORMATION**

- your penis has started to smell
- you have pain on passing urine.

**Men only:**

- your sexual partner does not have thrush
- you have penile sores, ulcers or blisters
- you have an abnormal penile discharge (leakage)
- your penis has started to smell
- you have pain on passing urine.

**TAKING OTHER MEDICINES**

Do NOT take this medicine if you are taking:
- terfenadine, an antihistamine
- ciclosporin or tacrolimus (used to reduce the rejection of an organ transplant or graft)
- theophylline (used to increase the air flow to the lungs and improve breathing)
- diuretics (“water tablets”) such as hydrochlorothiazide
- anticoagulants such as warfarin which prevents blood clots
- sulphonylureas e.g. chlorpropamide, glibenclamide, glipizide and tolbutamide
- phenytoin (used to control epilepsy)
- azathioprine (used to reduce the effect of the immune system e.g. to prevent the rejection of an organ transplant or graft)
- theophylline (used to increase the air flow to the lungs and improve breathing)
- zidovudine (used in HIV-positive patients)
- astemizole (an antihistamine)
- ciclosporin or tacrolimus (used to reduce the rejection of an organ transplant or graft).

Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription.

**STORAGE**

Take this leaflet, any remaining capsules, and the container with you to the hospital immediately or go to the casualty department at your nearest hospital if the following happens:
- an allergic reaction (swelling of the lips, face or neck leading to severe difficulty in breathing; skin rash or hives). This is a very serious but rare side effect.
- You may need urgent medical attention or hospitalisation.

If you experience an allergic reaction or rash after you have taken this medicine, you should never take it again.

The most commonly reported side effects are:
- stomach pain
- diarrhoea
- wind
- feeling sick.

The following side effects have been reported rarely:
- liver problems
- headache.

- You may need urgent medical attention or hospitalisation.
