PATIENT INFORMATION LEAFLET

Amantadine hydrochloride 100 mg capsules

Read all of this leaflet carefully before you start taking this medicine

1. What Amantadine hydrochloride 100 mg capsules are and what they are used for

Amantadine is a dopaminergic drug which means it can increase the levels of certain chemicals which transmit impulses in the nervous system, including the brain.

Amantadine hydrochloride 100 mg capsules are used:
• to treat Parkinson's disease by improving muscle control and reducing stiffness, shakiness and shuffling
• in the treatment of shingles (herpes zoster), to reduce pain.

2. Check before you take Amantadine hydrochloride 100 mg capsules

Before you take Amantadine hydrochloride 100 mg capsules tell your doctor if:
• you have increased pressure in the eyes (glaucoma).
• you have any mental illness for example, schizophrenia or dementia
• you are currently suffering from heart problems or heart failure (heart problems which cause shortness of breath or ankle swelling)
• you have a history of disease involving the heart and blood vessels

Take special care with Amantadine hydrochloride 100 mg capsules:
• you have any other illness which causes problems with your breathing
• you are taking any other medicine which reduces your blood constituents

If any of the above applies to you, or if you are not sure, speak to your doctor or pharmacist before you take Amantadine hydrochloride 100 mg capsules.

3. How to take Amantadine hydrochloride 100 mg capsules

Amantadine hydrochloride 100 mg capsules are used:
• to treat Parkinson's disease by improving muscle control and reducing stiffness, shakiness and shuffling

Amantadine hydrochloride 100 mg capsules are taken:
1 capsule (100mg) a day for the first week. Your doctor will increase this to 2 capsules a day (200 mg).
Adults over 65 years: 1 capsule (100mg) once a day.

Driving and using machines
Taking Amantadine hydrochloride 100 mg capsules may make your vision blurred or make you feel dizzy. If you are affected you should not drive a vehicle or use machinery until the effect has worn off.

4. Possible side effects

Tell your doctor or pharmacist if you are taking or have recently taken any of the following medicines as they may interfere with Amantadine hydrochloride 100 mg capsules:
• anti-spasmodics - (used to treat stomach spasms or cramps) such as hyoscine
• anti-cholinergics - (used to treat Parkinson's disease) such as procyclidine
• anti-psychotics - (used to improve thoughts, feelings and behaviour when these are disturbed in certain medical conditions) such as chlorpromazine, haloperidol
• diuretics (water tablets) - (used to relieve water retention and reduce high blood pressure) such as hydrochlorothiazide, amiloride or triamterene.

Tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription.

Taking with food and drink

Be careful when drinking alcohol whilst taking Amantadine hydrochloride 100 mg capsules, it may affect you more than usual.

Amantadine hydrochloride 100 mg capsules should be taken with a glass of water.

Pregnancy and breast-feeding

Do not take Amantadine hydrochloride 100 mg capsules if you are pregnant or trying to become pregnant. Do not take Amantadine hydrochloride 100 mg capsules if you are breast-feeding because amantadine passes into breast milk and could harm your baby.

Driving and using machines
Taking Amantadine hydrochloride 100 mg capsules may make your vision blurred or make you feel dizzy. If you are affected you should not drive a vehicle or use machinery until the effect has worn off.

Important information about some of the ingredients of Amantadine hydrochloride 100 mg capsules

Amantadine hydrochloride 100 mg capsules contain lactose. If you have been told by your doctor that you have an intolerance to some sugars, contact your doctor before taking Amantadine hydrochloride 100 mg capsules.

5. How to store Amantadine hydrochloride 100 mg capsules

Always take Amantadine hydrochloride 100 mg capsules exactly as your doctor has told you to. You should check with your doctor or pharmacist if you are not sure.

Swallow the capsules whole with a drink of water.

The usual dose is different in the following circumstances:

Parkinson's disease

Adults: 1 capsule (100mg) a day for the first week. Your doctor will increase this to 2 capsules a day (200 mg).

Shingles (herpes zoster)

The dose is 2 capsules (200mg) a day for 14 days. If your pain continues your doctor may give you another 14 days treatment.

If you have kidney problems, your doctor may give you a lower dose.

What to do if you take more Amantadine hydrochloride 100 mg capsules than you should

If you accidentally take too many capsules, or someone else takes any of your medicine, you should tell your doctor at once or contact the nearest accident and emergency department. Show any left-over medicines or the empty packet to the doctor.

If you forget to take Amantadine hydrochloride 100 mg capsules

Do not worry. If you miss a dose, take another as soon as you remember, unless it is almost time for your next dose. Then go on as before.

Do not take a double dose.

If you accidentally take too many capsules, or someone else takes any of your medicine, you should tell your doctor at once or contact the nearest accident and emergency department. Show any left-over medicines or the empty packet to the doctor.

If you stop taking Amantadine hydrochloride 100mg capsules

Do not stop taking Amantadine hydrochloride 100mg capsules suddenly as your symptoms may get worse. If you want to stop taking Amantadine hydrochloride 100mg capsules ask your doctor who will tell you how to reduce the dose gradually.

If you are taking anti-psychotics (used to treat mental disturbances) and you suddenly stop taking Amantadine hydrochloride 100mg capsules, you may develop a collection of symptoms including:

•   fever
•   muscle stiffness (difficulty in movement)
•   loss of bladder control (you may have a sudden urge to pass water).

If you develop any of these symptoms you should contact your doctor immediately.

Some patients may notice that this medicine loses its effect after they have taken it regularly for a few months. If you notice this, tell your doctor.

If you have any further questions on the use of this product, ask your doctor or pharmacist.

4. Possible side effects

Like all medicines, Amantadine hydrochloride 100mg capsules can cause side effects, although not everyone gets them. These effects are often mild and may wear off after a few days treatment. If they are severe or last more than a few days, tell your doctor or pharmacist.

If any of the following symptoms occur you should tell your doctor or contact the nearest hospital straight away:

•   convulsions (fits).
•   fainting
•   dizziness or lightheadedness

If any of the following symptoms get worse, or if you notice any side effects not listed in this leaflet, please tell your doctor or pharmacist.

If you get any side effects, talk to your doctor or pharmacist. This includes any possible side effects not listed in this leaflet. You can also report side effects directly via the Yellow Card Scheme (Website: www.mhra.gov.uk/yellowcard). By reporting side effects, you can help provide more information on the safety of this medicine.
